Introduction to Class 2 Transferases: EC 2.7.1.38 and EC 2.7.1.12

The EC numbers, 2.7.1.38 and 2.7.1.12, categorize these enzymes as transferases, specifically **phosphoryltransferases**. This means they catalyze the transfer of a phosphoryl group (PO₃) from one molecule to another. The first digit '2' denotes the transferase class. The second digit '7' specifies that the transferred group is a phosphoryl group. The third digit '1' further narrows it down to phosphoryltransferases acting on an alcohol group as an acceptor. The final digit differentiates specific enzymes within this subclass. These enzymes are of immense importance due to their involvement in various crucial cellular processes, including signal transduction, energy metabolism, and protein regulation.

The Springer Handbook of Enzymes provides detailed descriptions of these specific enzymes, including their catalytic mechanisms,
