FAQ

Q1: My Ford Fiesta 6000 CD player won't power on. What should I do?

A1: First, check the vehicle's fuses. A blown fuse supplying power to the radio is a common cause. If the fuses are fine, inspect the wiring connections at the back of the unit to ensure they are secure. If the problem persists, professional car stereo repair may be necessary.

Q2: The CD player skips frequently. How can I fix this?

A2: A dirty CD or a dirty lens is the most likely culprit. Clean the CD

with a soft cloth, and consider using a specialized CD lens cleaning disc to clean the laser mechanism inside the unit. If skipping continues, it might indicate a more serious problem requiring professional repair.

Q3: My radio reception is poor. What should I check?

A3: Poor radio reception might indicate a faulty antenna connection. Check the antenna cable for damage or loose connections at both ends. Also ensure the antenna itself is properly positioned and extended. If you have an external antenna, check its connections.
