Migration Considerations for BusinessObjects DI XI R2 Users

For organizations still relying on BusinessObjects DI XI R2, migrating to a modern BI solution is strongly recommended. This migration ensures access to current support, enhanced security features, improved collaboration capabilities, and a more user-friendly environment. The process involves assessing current data needs, selecting a suitable replacement platform (like SAP BusinessObjects BI 4.x or cloud-based alternatives), and planning a phased migration strategy. Thorough data migration, training, and testing are crucial to minimize disruption and ensure a successful transition. Consider the total cost of ownership (TCO) of migrating, including software licensing, training, and consulting services, against the benefits of enhanced functionality, security, and support.

Conclusion

BusinessObjects Desktop Intelligence XI R2, while possessing significant strengths in its time, is now a legacy product. Its intuitive interface and robust reporting features were highly valuable, but its lack of support and inherent limitations necessitate a move towards more modern Business Intelligence solutions. Organizations utilizing XI R2 should carefully assess their current needs and plan a strategic migration to a platform that better addresses the evolving requirements of modern data analysis and reporting. Understanding the transition costs and benefits, and developing a well-defined migration plan are critical aspects of a successful upgrade.
